Node.js

A JavaScript runtime built on Google's open source V8 engine that can execute programs outside a browser on Windows, Mac, and Linux.

npm

Node.js provides a package manager called the Node Package Manager or "npm" to manage third-party code dependencies.

How IDEs Take Advantage of Node.js

**Language
tools**

**Debugging
tools**

**Package
tools**

**Task runners
and scripts**

How Different Runtimes Compare

Browser

Runs on the end-user's machine within their browser

Typically needs to be compiled by tools like Webpack or Vite

Dependencies are managed by **npm**

Client-side (frontend)

VS

Node.js

Runs without a browser using **node** executable

Typically does not need to be compiled*

Dependencies are managed by **npm**

Server-side (backend)

How Different Runtimes Compare

Browser	VS	Node.js
<p>Runs on the end-user's machine within their browser</p> <p>Typically needs to be compiled by tools like Webpack or Vite</p> <p>Dependencies are managed by npm</p> <p>Client-side (frontend)</p>		<p>Runs without a browser using node executable</p> <p>Typically does not need to be compiled*</p> <p>Dependencies are managed by npm</p> <p>Server-side (backend)</p>

* TypeScript and C++ bindings need to be compiled to JavaScript to run in Node.js

Windows Installation Step-by-step

Walkthrough

Install Node.js and npm on Windows

Download Installer

Download Node.js®

Download Node.js the way you want.

[Prebuilt Installer](#) [Prebuilt Binaries](#) [Package Manager](#) [Source Code](#)

I want the version of Node.js for running

 **Download Node.js v20.12.2**

Node.js includes npm (10.5.0) ↗.

[Read the changelog for this version](#) ↗

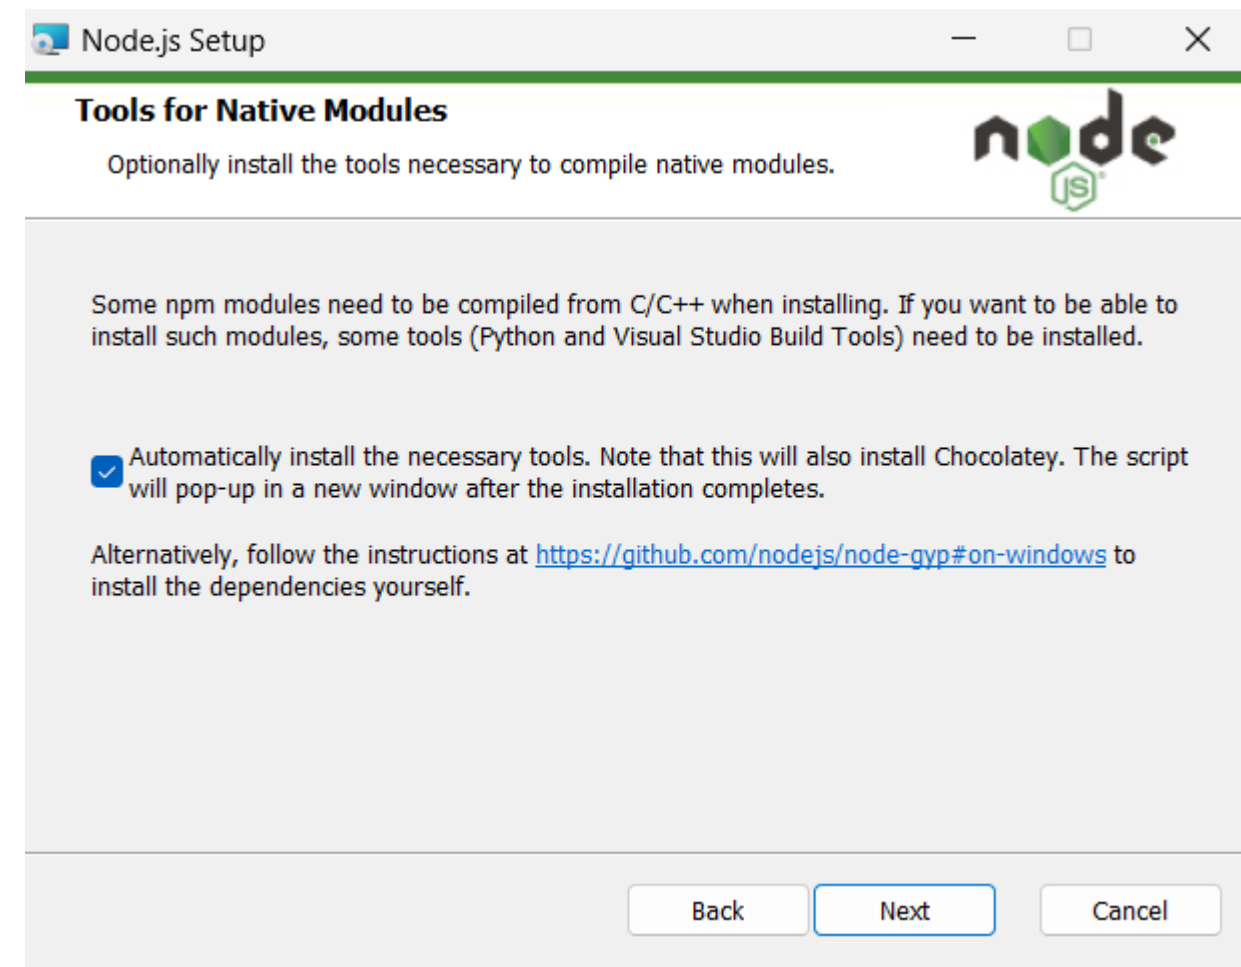

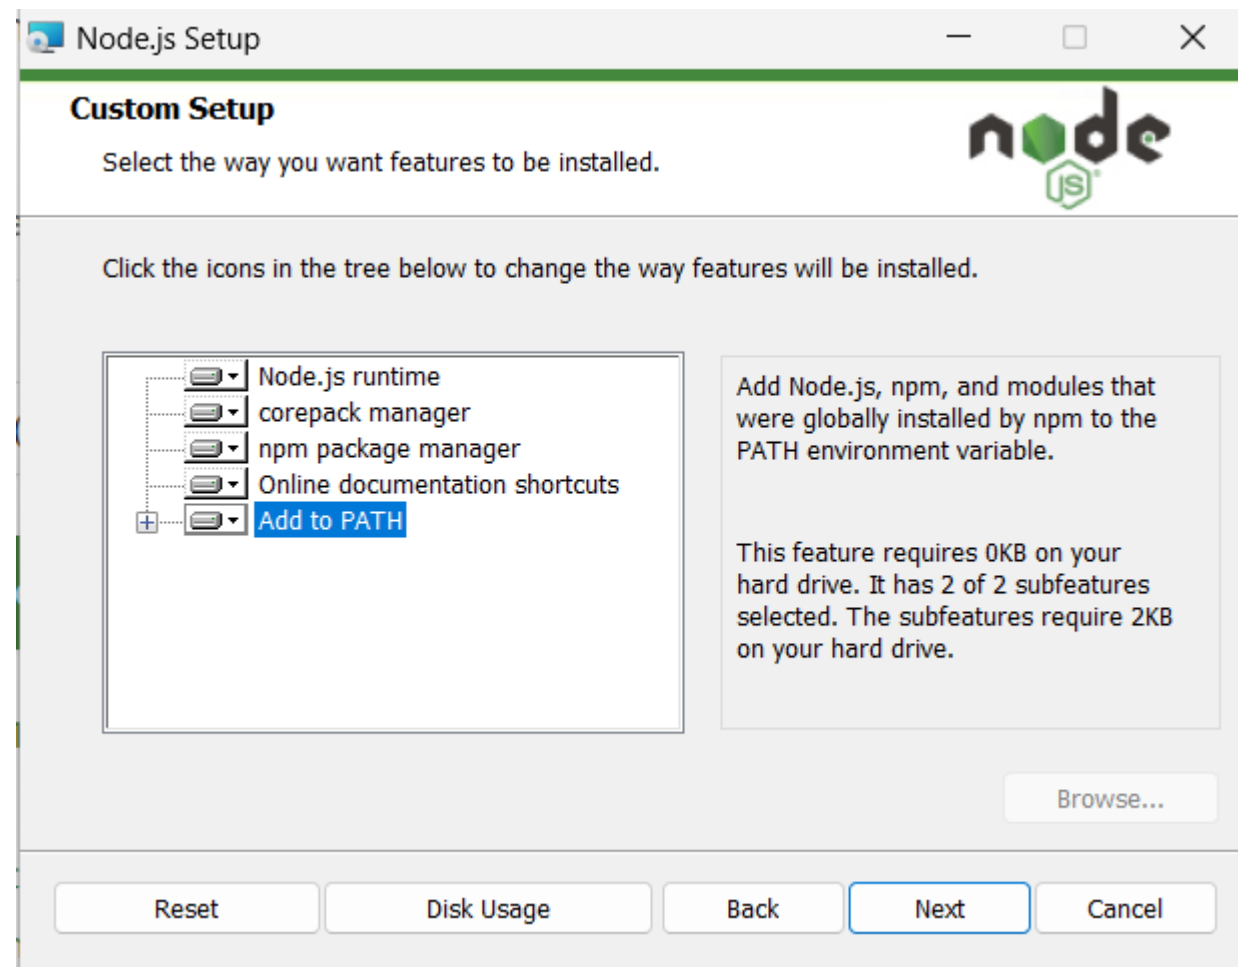

[Read the blog post for this version](#) ↗

[Learn how to verify signed SHASUMS](#) ↗

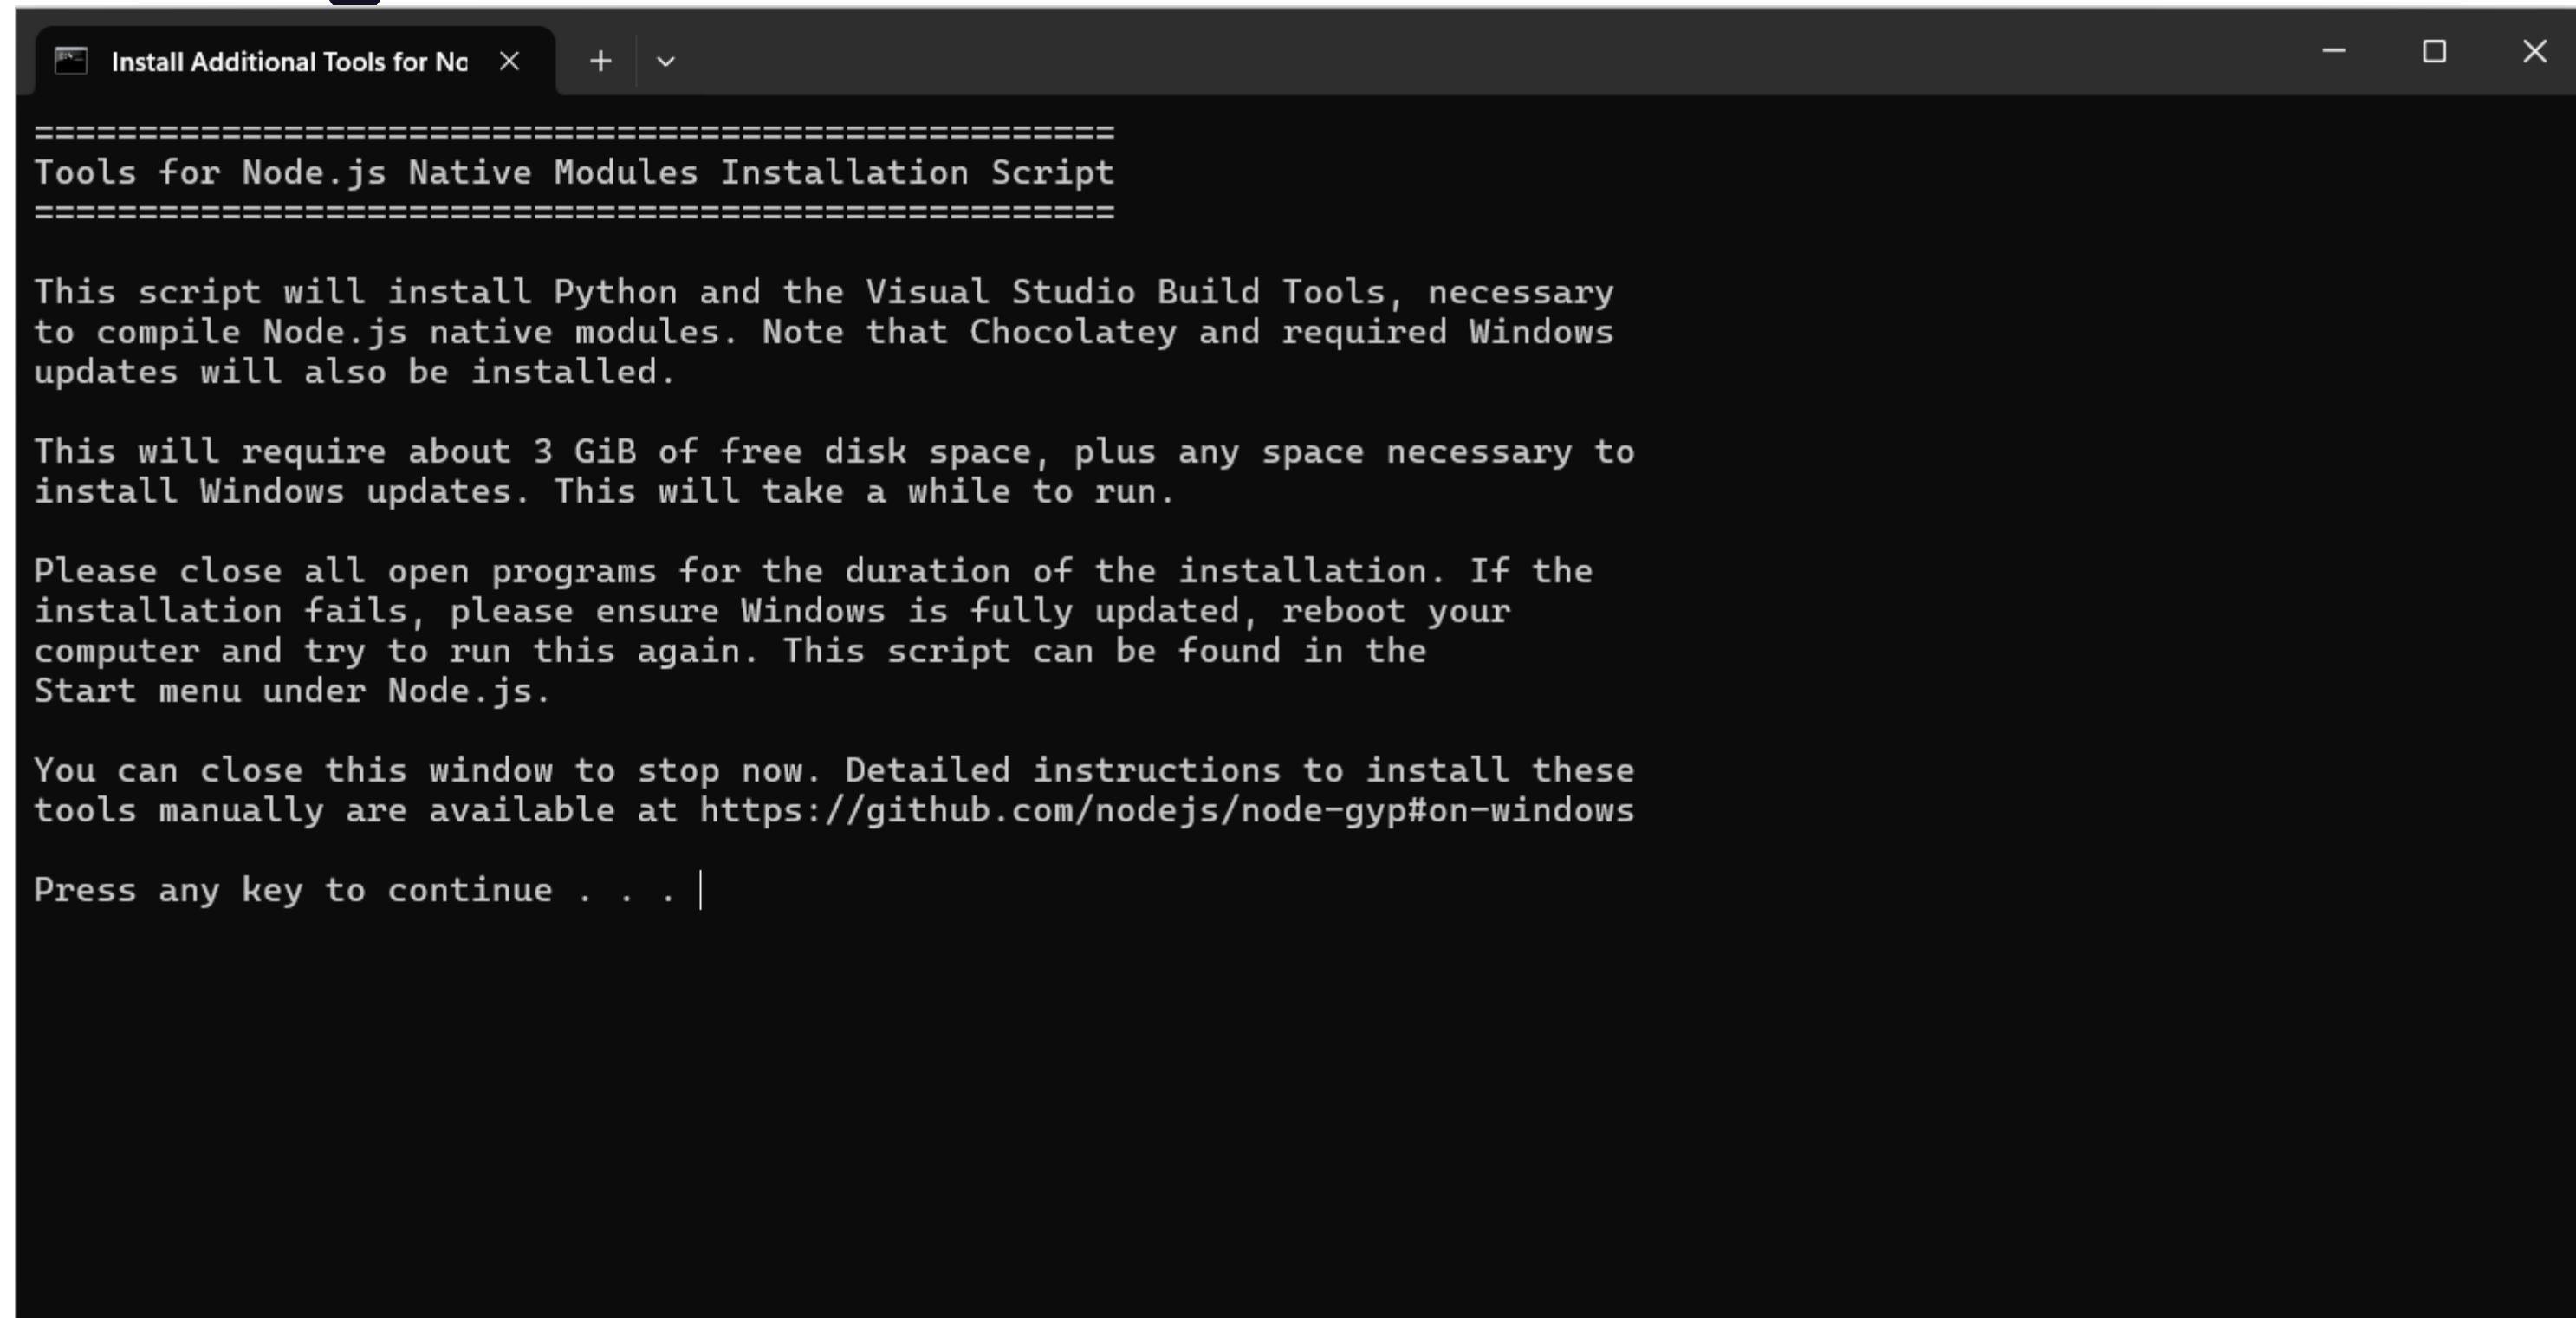

[Check out all available Node.js download options](#) ↗

Go Through Installation Process

Go Through Installation Process

```
Install Additional Tools for Node.js
Tools for Node.js Native Modules Installation Script

This script will install Python and the Visual Studio Build Tools, necessary
to compile Node.js native modules. Note that Chocolatey and required Windows
updates will also be installed.

This will require about 3 GiB of free disk space, plus any space necessary to
install Windows updates. This will take a while to run.

Please close all open programs for the duration of the installation. If the
installation fails, please ensure Windows is fully updated, reboot your
computer and try to run this again. This script can be found in the
Start menu under Node.js.

You can close this window to stop now. Detailed instructions to install these
tools manually are available at https://github.com/nodejs/node-gyp#on-windows

Press any key to continue . . . |
```

Installing Native Build Tools Manually

On Windows

Install tools with [Chocolatey](#):

```
choco install python visualstudio2022-workload-vctools -y
```

Or install and configure Python and Visual Studio tools manually:

- Install the current [version of Python](#) from the [Microsoft Store](#).
- Install Visual C++ Build Environment: For Visual Studio 2019 or later, use the `Desktop development with C++` workload from [Visual Studio Community](#). For a version older than Visual Studio 2019, install [Visual Studio Build Tools](#) with the `Visual C++ build tools` option.

If the above steps didn't work for you, please visit [Microsoft's Node.js Guidelines for Windows](#) for additional tips.

To target native ARM64 Node.js on Windows on ARM, add the components "Visual C++ compilers and libraries for ARM64" and "Visual C++ ATL for ARM64".

To use the native ARM64 C++ compiler on Windows on ARM, ensure that you have Visual Studio 2022 [17.4 or later](#) installed.

It's advised to install following Powershell module: [VSSetup](#) using `Install-Module VSSetup -Scope CurrentUser`. This will make Visual Studio detection logic to use more flexible and accessible method, avoiding Powershell's `ConstrainedLanguage` mode.

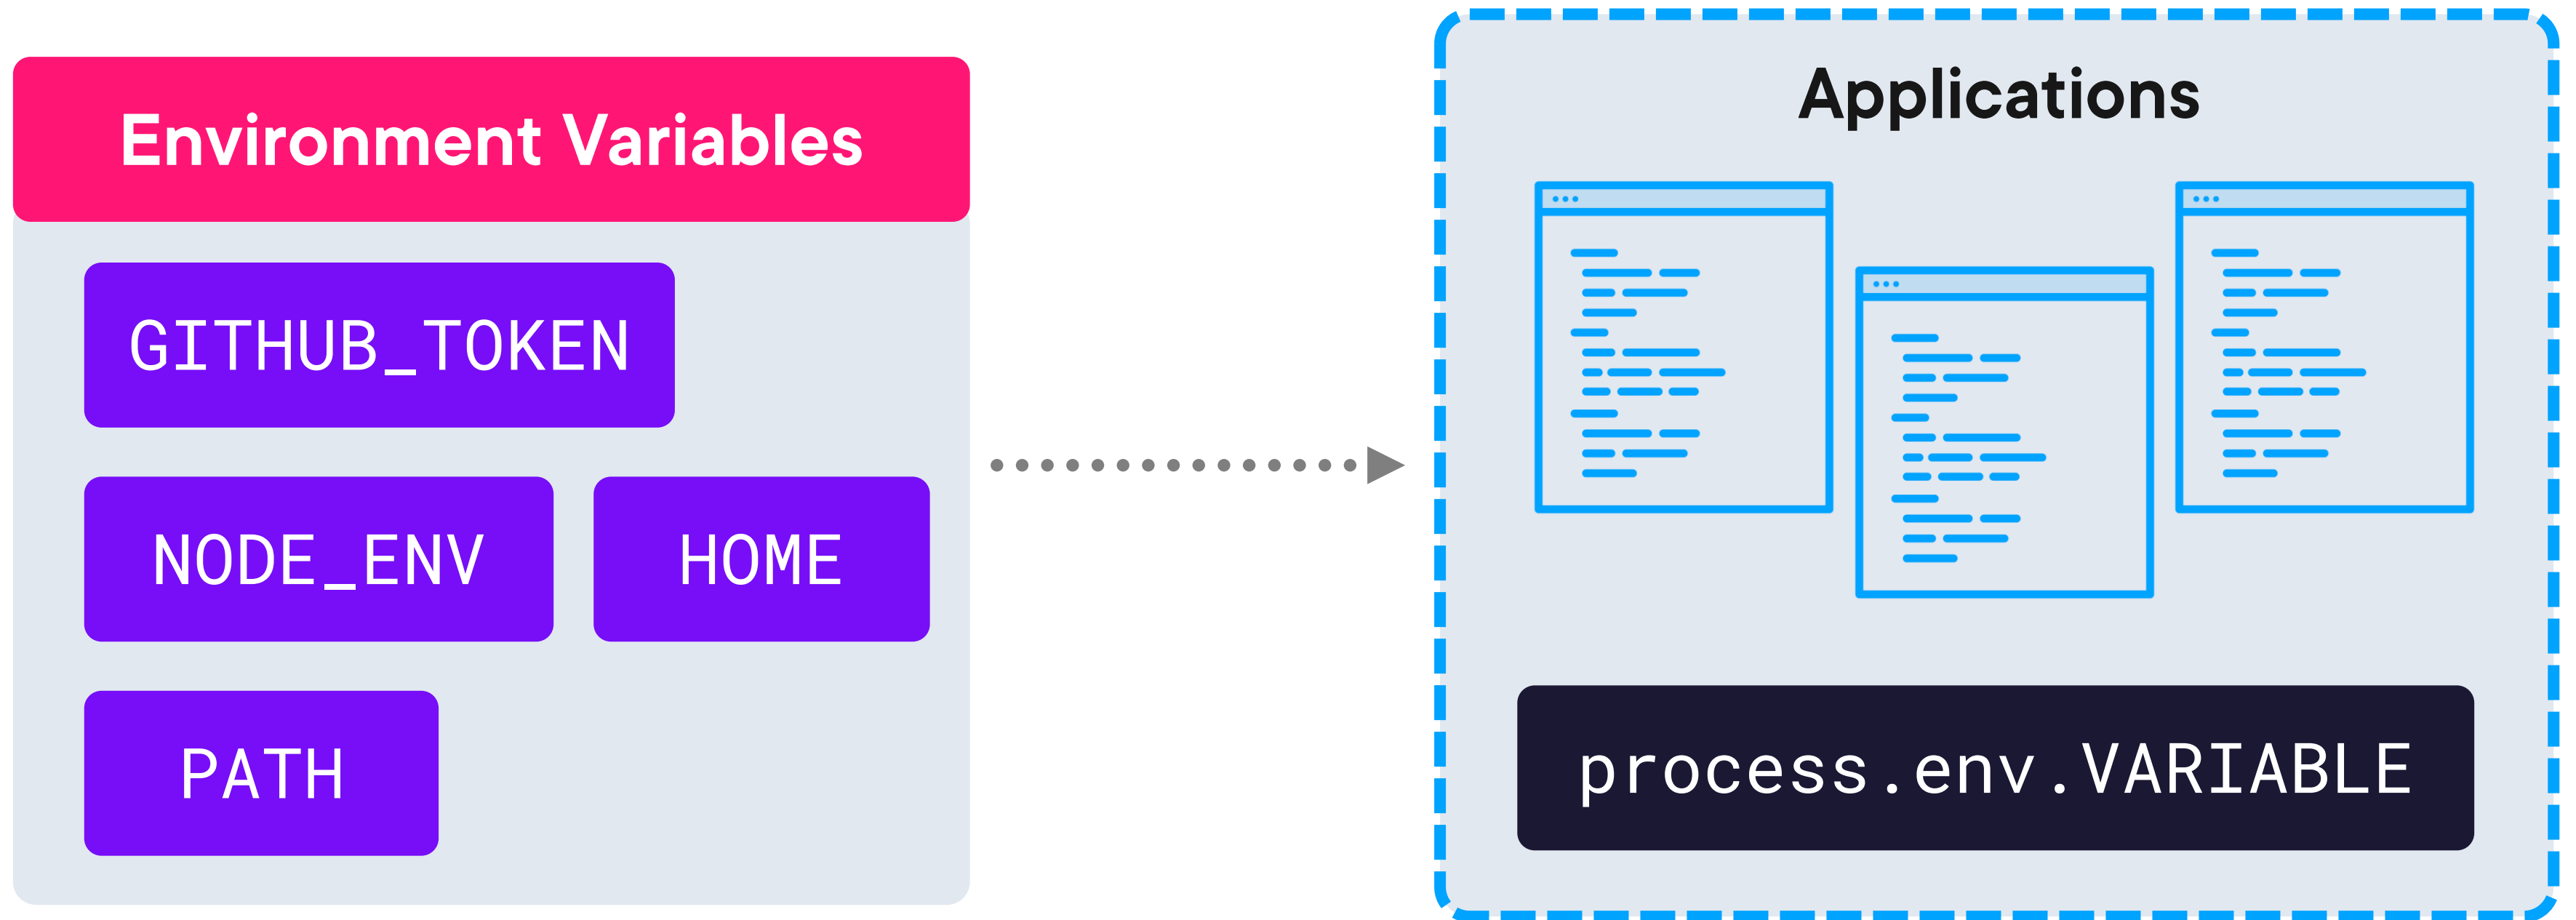

```
'node' is not recognized as an internal or external command
```

Node Cannot Be Executed in Terminal

**This is due not adding the Node.js installation folder in the PATH system environment variable.
Add the installation path and restart the system to fix it.**

What Are Environment Variables?

Adding **node** to the PATH

How to add /usr/local/bin in \$PATH on Mac

<https://stackoverflow.com/q/11025980>

Adding a directory to the PATH environment variable in Windows

<https://stackoverflow.com/q/9546324>

'node' is not recognized as an internal or external command

<https://stackoverflow.com/a/8768567>

Error: EMFILE, too many open files

```
# Check your current max file count  
$ sysctl -A | grep kern.maxfiles
```

Increasing Open File Limits

If you run into this error on macOS, you may need to increase the system's open file limit

<https://stackoverflow.com/a/27982223>

FATAL ERROR: (...) Allocation failed - JavaScript heap out of memory

Recommended: Set below maximum RAM capacity

```
export NODE_OPTIONS="--max-old-space-size=1536" # 2gb machine
export NODE_OPTIONS="--max-old-space-size=2048" # 4gb machine
export NODE_OPTIONS="--max-old-space-size=4096" # 8gb machine
export NODE_OPTIONS="--max-old-space-size=8192" # 16gb machine
export NODE_OPTIONS="--max-old-space-size=16384" # 32gb machine
```

Increasing Memory Usage Limits

If you run into out of memory crashes, you may need to increase Node's memory limit

<https://stackoverflow.com/a/64409997>

```
> NODE_ENV=production npm start
```

NODE_ENV=production : The term 'NODE_ENV=production' is not recognized as the name of a cmdlet, function, script file, or operable program.

Tips for Using Node.js on Windows Subsystem for Linux (WSL)

Not every JavaScript project will run natively on Windows. In that case, you may need to configure the Windows Subsystem for Linux (WSL) and install Node.js.

Summary

`npm` is packaged with all Node.js installations

You can upgrade `npm` separately

Use a version manager like `nvm` when dealing with multiple projects

Make sure `node` and `npm` commands work on the command-line
