"I want to see the menus change"

Controlling the Transition

Available Timing Functions

ease	**linear**	**ease-in**
ease-out	**ease-in-out**	**steps**

```
steps(1, start);
```

◄ **Start – 1st step happens immediately**

◄ **End – Last step happens at end of transition**

The default, ease, will cover almost all of your cases

Transitioning without Hovering

CSS transitions provide a way to control animation speed when changing CSS properties. Instead of having property changes take effect immediately, you can cause the changes in a property to take place over a period of time.

# Creating the Left-Nav

Independent Transitions

Waiting on Transitions

Transition Shorthand

Not all properties are able to be transitioned

Transitions make other effects more powerful
